Subject: Nonrecord Technical Reference in your future file room

Hi Hyon-Su—This is helpful. I'll know within a week or so whether anticipated volumes of records exceed capacity for the OWW file room. If so, we'll have a practical space dilemma and I'd insist that records are prioritized over reference (due to the legal and security requirements mentioned in previous email).

If there's room and if there's no other place on the floor for them, the technical reference could potentially go in the file room. That's ultimately the domain of OWW. We are required by national policy to keep them separate from the records, so would need to think about putting them at the end and build in separation, at least an empty bay etc. Thanks.

Subject: Walkthrough NPU Files

Hi Mike,
Attached are the spreadsheets for NPU files, Records as well as non-records for your information. We have currently 105 linear feet to CRC, 97.5 linear feet to DFA, and 86.4 linear feet of non-records. 288.9 linear feet in 13E & Mining Room and 156 linear feet in 13W. It comes to a grand total of 444.9 linear feet.
According to your email, it seems that we have to find a home for the non-records. I agree by definition with you. However, there is a leap in our logic. The mining technical references, even though they are non-records, are an integral part of the mining permitting process. We wish we could store them in DFA or some place on the 19th floor. Thank you.
